

Gauging the perception of radiation risk: a public facing survey set up within the CONCERT European Joint Programme

Sara Della Monaca, Valentina Dini, Sveva Grande, Alessandra Palma, Paola Fattibene, Antonella Rosi, Maria Antonella Tabocchini, Tatiana Duranova, Tanja Perko, Christiane Pözl-Viol, Yevgeniya Tomkiv, Catrinel Turcanu, Christine Willrodt, Maria José Bação Madruga, Nina Chobanova, Sotiris Economides, Rein Koch, Bogusław Michalik, Ivica Prlić, Almudena Real, Alan Tkaczyk, Mauro Grigioni, Simon Bouffler

Introduction

- Work package 5 of the EJP-CONCERT deals with the **stakeholder engagement and communication strategies in radiation protection**
- Task 5.3 of the work package, in particular, concerns the **development of survey activities for a more efficient interaction with civil society**

The public faced e-survey

Within this task, a public-face e-survey was developed, it is currently open, you can find it in the concert website and it is described in the poster

http://www.concert-h2020.eu/en/Stakeholders/Public_survey

QUESTIONS

RESPONSES

1

Background questions

While the survey is anonymous, we would like to know more about your background.

BG1 Gender of the respondent

Male

Female

BG2 Country of residence

Short answer text

The structure

FIRST SECTION: BACKGROUND

General questions about **personal information on the responder** (gender, age, place of residence, job and education, experience with ionizing radiation and radiation protection field)

SECOND SECTION: GENERAL PART

Questions about **the attitude towards science and technology**, the **satisfaction towards the actors in the radiation protection domain** and the **actions undertaken by radiation protection authorities**, the **opinion towards the communication channels about radiological and nuclear risk**.

THIRD SECTION: SPECIFIC PART

The responder is invited to fill only some specific subsections, according to the roles he deals with in ionizing radiation. These subsections are: **professional exposure, medical exposure, duty holders - decision makers, specific categories of potentially exposed population, cultural involvement or interest in radiation protection issues**.

The implementation

To reach a larger segment of the population, trying to minimize the impact of linguistic barriers, the text of the survey has been **translated in several European languages** by EU CONCERT members, mother language speakers, who volunteered for that.

INTRODUCTION

Work package 5 of EJP-CONCERT deals with the stakeholder engagement and communication strategies in radiation protection; task 5.3, in particular, aims at developing survey activities for a more efficient interaction with civil society and using social media for public communication.

This task falls into the scope of the CONCERT consortium of answering the needs in radiation protection for the public, occupationally exposed workers, patients in medicine.

Within this context, a public facing e-survey was developed in the last year and launched on 31 May 2017.

The survey aims to gauge the perception of radiation risk amongst a wide range of people who are not radiation specialists and their opinion on information that would be helpful to a general audience to understand radiation risk.

THE STRUCTURE OF THE SURVEY

FIRST SECTION: BACKGROUND

Background questions

General questions about personal information on the responder (gender, age, place of residence, job and education, experience with ionizing radiation and radiation protection field)

SECOND SECTION: GENERAL PART

Questions about the attitude towards science and technology, the satisfaction towards the actors in the radiation protection domain and the actions undertaken by radiation protection authorities, the opinion towards the communication channels about radiological and nuclear risk.

Additionally, a question to prepare the future consultation on the results of the research roadmap to help ensure that future scientific work is consistent with societal priorities.

THIRD SECTION: SPECIFIC PART

The responder is invited to fill only some specific subsections, according to the roles he deals with in ionizing radiation.

These subsections are: professional exposure, medical exposure, duty holders - decision makers, specific categories of potentially exposed population, cultural involvement or interest in radiation protection issues.

THE IMPLEMENTATION OF THE SURVEY

Then, to reach a larger segment of the population, trying to minimize the impact of linguistic barriers, the text of the survey has been translated in several European languages by EU CONCERT members, mother language speakers, who volunteered for that.

Up to now, besides English, completed versions are in Italian, Estonian, Portuguese, Slovak, Croatian, German, Bulgarian, Polish, French, Dutch and Greek. Other translations are expected to be finalized soon.

All the versions of the survey are available at: http://www.concert-h2020.eu/en/Stakeholders/Public_survey

Acknowledgments
This work is supported by the EJP-CONCERT (European Joint Programme for the Integration of Radiation Protection Research) of the EURATOM research and training programme 2014-2018, under the grant number No. 662287.
